Spence[™] High Capacity Float and Thermostatic Steam Trap

Features

- Heavy Duty Construction
- · Single and Double Seated Design
- Instantaneous Valve Action
- Water Sealed Valve
- · High Capacity Air Handling
- · Continuous Rapid Flow of Condensate
- · Not Affected by Sudden Pressure Changes
- Energy Efficient and Cost Effective
- Operates Against Back Pressure
- Conforms to Federal Specification WWT-696

Introduction

A steam trap is an automatic valve which discharges condensate, undesirable air and non-condensibles from a system while trapping or holding in steam.

The FTH Series are float and thermostatic steam traps. The float actuates the valve via a hinged lever and linkage. The air vent is a balanced pressure design with stainless steel welded encapsulated bellows capable of discharging air and non-condensible gases continuously. The traps are cast iron bodied suitable for pressures to 200 psi / 13.8 bar with NPT connection.

Figure 1. High Capacity Steam Trap

Principle of Operation

On startup, air and non-condensible gases enter the trap and are automatically vented through an accurate balanced-pressure internal thermostatic air vent. As condensate enters the trap, the float and lever mechanism is raised, lifting the valve off the seat, discharging the condensate. Condensate will continue to be discharged at the same rate at which it is entering. Any air or non-condensible gas that may accumulate will be continually and efficiently passed by the thermostatic air vent.

Specifications

The Specifications section gives some general specifications for the High Capacity Steam Trap

Available Configurations Types FTH-C2H9A and FTH-C2H9M: Steam differential pressure to 20 psig / 1.4 barg Types FTH-C5H9A and FTH-C5H9M: Steam differential pressure to 175 psig / 12.1 barg Types FTH-C5J9A and FTH-C5J9M: Steam differential pressure to 175 psig / 12.1 barg	Maximum Operating Temperature ⁽¹⁾ Types FTH-C2H9A and FTH-C2H9M: 259°F / 126°C Types FTH-C5H9A, FTH-C5H9M, FTH-C5J9A and FTH-C5J9M: 450°F / 232°C Maximum Allowable Temperature ⁽¹⁾ 450°F / 232°C
Body Sizes and End Connection Style NPS 2 and 2-1/2 / DN 50 and 65	Capacity Information See Table 1 and 2
Maximum Operating Pressure ⁽¹⁾ Type FTH-C2H9A and FTH-C2H9M: 20 psig / 1.4 barg Types FTH-C5H9A, FTH-C5H9M, FTH-C5J9A and FTH-C5J9M: 175 psig / 12.1 barg Maximum Allowable Pressure ⁽¹⁾ 200 psig / 13.8 barg	Materials of Construction Head and Body: Cast iron Bolts: Steel Gaskets: Compressed Graphite Lever Assembly: Stainless steel Float, Plug and Seat: Stainless steel Air Vent: Stainless steel/Phosphorus Bronze or Monel
1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation	n should not be exceeded.

Installation

The FTH Series should be installed in an accessible position and location for easy servicing. The trap seat rating stamped on the nameplate, must be equal or greater than the maximum pressure differential across the trap. Install the trap straight, plumb and in a level position to ensure proper installation.

- 1. Determine where to install trap, based on the following requirements:
 - a. The trap must be located as closed as possible, and below the equipment to be drained.
 - b. The trap must be in a straight run of horizontal pipe, and pitched to allow condensate to flow into trap inlet, and away from trap outlet.
 - c. Allow for enough space around the trap for servicing which may include removal of the body or cover, depending on the model you are installing.

- 2. Install a Y-strainer with a Blowdown valve in a pipe, ahead of steam trap. This prevents dirt from entering trap.
- 3. Install union fittings and a shutoff valve in inlet pipe and outlet pipe. This allows trap to be isolated when servicing.
- 4. Install a test valve in outlet pipe, and cap it. This allows trap to be tested. Cap is used as safety precaution when unit is not being tested.
- 5. Blowdown piping using full steam pressure for five minutes. This cleaning process will remove debris from pipe and oil from system.

Ordering Information

When ordering, complete the ordering guide on this page. Refer to the Specifications section. Review the description to the right of each specification and the information in each referenced table or figure. Specify your choice whenever a selection is offered.
